

LOGICS PACKAGE

The ControlMaster® Mechanical Logics Package enables RCT to remote ANY mobile machine in the construction, industrial and mining (both surface and underground) industries – anywhere in the world.

As a result, RCT has long been affiliated with the supply of remotes for many OEM's machines, both at factory and dealer level and to date; RCT has converted more machines to remotes than any other competitor combined.

The mechatronics of the Logics Packages are time-proven, keeping pace with machine changes; the package is constantly updated to ensure it continues to suit any line of machine make and model.

Each machine is different and RCT offers a bespoke package for each individual machine to ensure results.

RCT's ControlMaster® range of remotes suits every machine across all brands and makes. If a client wants to remote a mixed fleet without having to return to each individual OEM, then RCT can do it and be confident that RCT can fit any machine with remotes, anywhere, cost effectively.

RCT HAS SUCCESSFULLY FITTED LOGICS PACKAGES TO:
